

REED'S METALS

Roofing Catalog

ORDER TODAY, PICK UP TODAY!

Customer satisfaction is our top priority!

Great job on the steel roofing order. I've saved nearly as much on electric bills as the materials cost. My electric bill was \$235 before, the next month it was \$137. Looks great! Thanks!

-I. Adams

I've always gotten excellent service and quality products at a fair price. The people here look like they appreciate your business. It amazes me how fast they get their products to their customers.

-F. McCurdy

We proudly buy our products from Reed's Metals because they offer top-quality metal roofing components and accessories that can be ordered and picked up same day. That's a nice advantage we love. It feels like home at Reed's Metals.

-M. Livings

In 1998, Bernard "Bernie" Reed founded Reed's Metals in a 200-square-foot portable shed in Lawrence County, MS, but that was not the start of his humble beginnings. As a young child, Reed lived out of a traveling school bus that migrated to a new state every six months, but these challenges soon became the fuel to his hunger to create stability and a better life for himself. Although his roots started with fishing in his hometown of Horseshoe Beach, FL, to planting trees across the south, he decided to raise his family in Monticello, MS.

Reed, now a multi-million-dollar metal provider to residential, commercial, and industrial customers, is founder or partner to 8 Reed's Metals locations that stretch across 7 states within the U.S., including Mississippi, Florida, Louisiana, Tennessee, Arkansas, Texas, and Missouri. Headquartered on a 20-acre site in Brookhaven, MS, Reed's Metals is a proud provider of metal roofing, pre-engineered steel buildings, and quality self-storage solutions nationwide.

Why Metal Roofing?

Durability

Cost must be considered across the lifespan of the roof. The average life of a non-metal roof is 17 years. Asphalt can require re-roofing every 10-15 years. A metal roofing system offers unmatched durability, lasting 2-3 times longer. Installed and maintained properly, a metal roof can last a lifetime. Coatings are stain resistant and are warranted up to 45 years regardless of the panel design you choose. Chances are good that a metal roof will be the last roof you ever install on your home.

Cost

Metal roofing costs are comparable to high quality shingle costs. However, the lifespan and warranty of the metal roof make it a better value. Consider the energy savings and cost to the environment as well. Metal is one of the most environmentally friendly roofing materials. The long life of a metal roof means it creates minimal waste, and when metal roofs are ready to be replaced they are highly recyclable. Metal roofing also reflects heat better than other roof products, helping to save energy and lower your energy costs.

Weather

Reed's Metals roof products are UL Standard tested for uplift, impact, and fire resistance. Choose safety. Protect your property from high winds, hail, snow, and burning embers. Metal roofing is non-combustible and considered a class A fire rated roof when installed in new construction or when the existing roof is torn off.

Many insurance providers offer discounts for installing a metal roof. Ask yours today!

Dispelling Myths

Lightning

A metal roof will not increase the likelihood of lightning striking your home. However, if your home were hit by lightning, your metal roof would disperse the energy safely throughout the structure. Since metal roofing isn't combustible or flammable, it's a low risk and desirable roofing option where severe weather is a concern.

Rust

Today's metal roofing systems are built to last. Steel metal roofing has a "metallic coating" made of either zinc or a combination of zinc and aluminum. This metallic coating prevents rust from forming and is bonded to the steel at the factory. Paint is then applied over the metallic coating to provide the long-lasting color homeowners desire.

Noise

A common misconception is that a metal roof will be noisier than other types of roofing. When installed with solid decking, a metal roof on your home will actually silence noise from the rain, hail, and bad weather much better than other roofing materials.

Dents

In most cases, a metal roof can withstand decades of abuse from extreme weather like hail, high winds, and heavy snow. Today's systems also have up to a 150-mph wind rating (equal to an F2 tornado), meaning your metal roof is also safe from wind gusts that can accompany hail storms.

Safety

Many people think you can't (or shouldn't) walk on a metal roof, but the truth is that you can safely walk any metal roof without damaging it. Before you walk your roof, however, we recommend you talk to your installer or roof manufacturer first. They will have the details on how to walk the particular roof you have, based on the style you chose and your roof pitch.

Metal vs. Shingle

Metal roofing plus installation can sometimes be 30% more expensive than installing shingles.

Shingles must be replaced every 10-15 years.

Your metal roof comes with an up-to 45-year written paint warranty.

The metal itself will last even longer!

A metal roof costs much less than shingles over time!

Product Approvals

Have you ever heard of UL ratings?

UL Listing means that UL has tested representative samples of a product and determined that the product meets specific, defined requirements. These requirements are often based on UL's published and nationally recognized Standards for Safety.

The Reed's Metals residential profile is UL rated!

UL 580 - Uplift Resistance

UL 2218 & 790 - Fire & Impact Resistance

Superior Substrate. What does that mean for you?

Some metal roofing companies have chosen to use inferior substrate to stay viable in this competitive market. Make sure you are getting the best metal for your project. Regardless of the paint system used, the paint offers little corrosion or rust resistance itself. It merely retards the loss of the aluminumzinc alloy coating. The rust resistance of metal roofing comes primarily from the alloy coating, called the substrate. The flexibility and strength come from the thickness and hardness of the steel core.

Galvalume - AZ-55 Substrate
Painted - AZ-50 Substrate

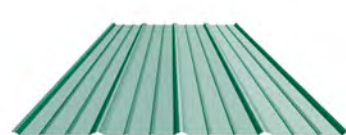

9 Panel Profiles

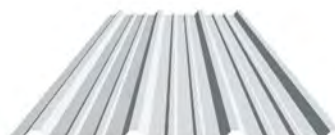

Reed's Metals stocks coil in over 20 colors to be able to provide fast turn around on 26 and 29 gauge panels. We offer PVDF heavier gauge panels in PBR, Standing Seam, and TS-324. We can run same-day orders for Residential and PBR panels at our manufacturing locations. Standing seam panels can be crated and delivered to your job site, or we can run on-site for you to install directly.

Most importantly – Reed's ensures you meet building codes with panels made from AZ-50 and AZ55 substrates. Reed's supplies US painted steel with industry-leading Akzo-Nobel's paint system.

Residential Roofing

Order Today, Pick Up Today!

The residential profile is undeniably our most popular residential product. The majority use of the product is roofing on residential homes but it is also used for pole barns, siding, liner panels, and more. When it comes down to it, our residential profile is the go-to product for most metal projects.

Our residential profile spans 36" wide, and we keep more than 20 colors in multiple gauges in stock at all times. We cut each panel to the inch to perfectly cover your roof. We manufacture the metal panels in-house according to your specifications, and the best part? You can pick up the same day! **Our speed is completely unmatched.**

Residential - 36" coverage

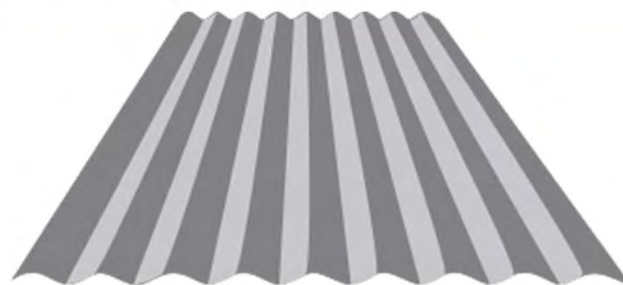

Corrugated

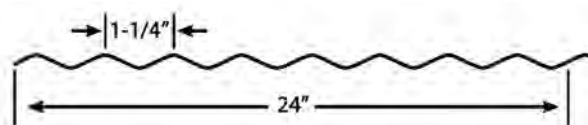

Corrugated is the most traditional profile and has been around for ages. A long-time staple in agricultural projects, today architects and designers are finding innovative ways to utilize corrugated metal for accents, siding, and roofing.

Hint - take a look at our Pinterest page for some creative uses of our corrugated metal, available in more than 20 colors.

Corrugated - 24" coverage

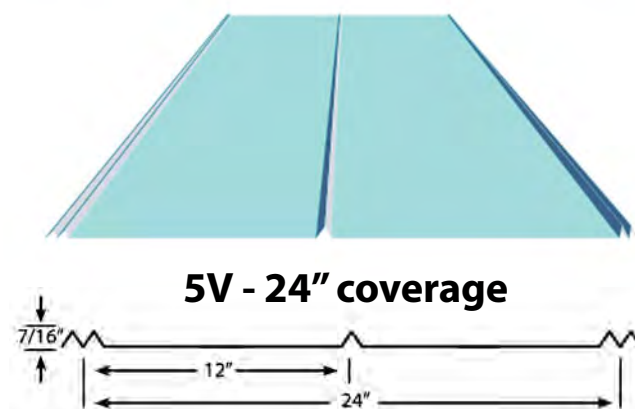

Available in 1-1/4" and 7/8" rib height

5-V

For generations, 5-V metal roofing has been used for agricultural projects and waterfront property, ranging from boathouses to multi-million dollar condominiums and beach homes. The double-lap design creates superior leak resistance. That, coupled with the traditional appearance makes 5-V especially popular. Install the 5-V on solid decking with a minimum slope of 3/12. Our 5-V metal roofing panel is offered in 26 and 29 gauge steel with more than 20 colors available.

Available flat and with striations

Standing- Seam

**We can crate and deliver
your order, or we come to
you and run on-site!**

No exposed fasteners. No leaks!

We call standing-seam the “cadillac” of metal roofing. Why? Because it’s known for its sleek, high-end design. Standing-seam roofing is designed to conceal all screws. And because of the concealed screws, there are no leaks.

These profiles can span from 14.5”- 18” wide. We even bring our rollforming machine to your jobsite and run the panels onsite to ensure speed, quality, and accuracy.

Perma-Lok

The Perma-Lok profile is the go-to **residential** choice for standing-seam. It features a fastener strip, which is then hidden by the lap panel that snaps over the top.

Secure-Seam

The Secure-Seam profile is used for both **residential and commercial** applications. It uses a clip system to fasten to the decking, then the laps snap together, concealing the clips.

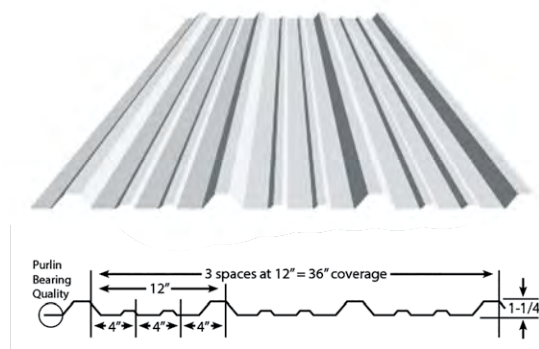

**Tested and approved for up to
140 MPH winds!**

Commercial Roofing

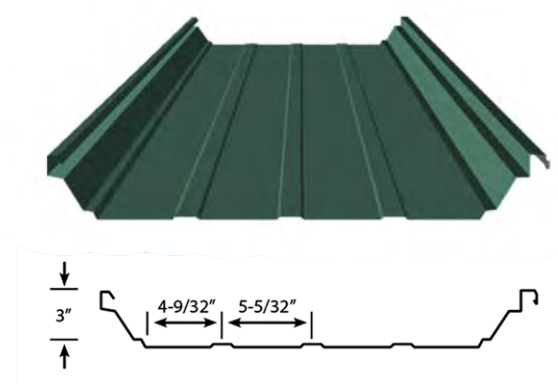

With our complete line of commercial roofing products, we have the profile and color to fit any project. The most traditional commercial panel is the PBR profile. It is designed with a purlin bearing leg allowing for maximum purlin spacing. The TS-324, Mechanical-Seam, and Secure-Seam profiles are unique because they use a concealed fastener system. Each profile is uniquely designed to offer maximum coverage, quality, and durability.

Commercial Roofing

Weather Tight Warranty

A weathertight warranty is simply a written warranty that covers any leaks that may occur during the warranty's coverage.

- Covers repairs up to the cost of the materials plus labor
- Available in 5, 10, 15, 20 year coverage
- No dollar limit available in 20-year warranty
- Up to 18" Secure-Seam & Mechanical-Seam
- Hot-melt sealant
- Available in Trinar paint finish - Standard 35-yr Paint Warranty
- Available in Galvalume - Standard 25-yr Warranty
- 24-gauge most popular with 26-gauge option
- Competitive pricing

Not just for roofing!

Metal panels can be used for a variety of applications in addition to roofing: siding, liner panels, soffit panels, and more. With our variety of profiles and colors, we have the right products for your next project.

Consider lining your shop with liner panels. Available in our standard 45-year warranty as well as non-warranty and 10-year, this product can protect your walls from any vehicle or machinery damage.

Our corrugated panel is the most popular for interior linings and other accents. Some homeowners have even covered their ceiling in our corrugated panel.

Additionally, we offer a soffit panel in all of our 20+ colors.

Trim

Custom Trim Available!

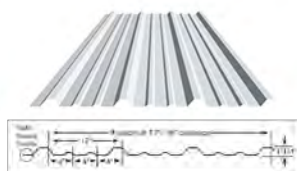

What's a metal roof or metal building without trim? Incomplete!

Having the right trim is absolutely necessary. Not only does the right trim give any job a finished look, but also has many practical applications. Skipping out on the necessary trim will surely result in leaks, damages, and an eye sore.

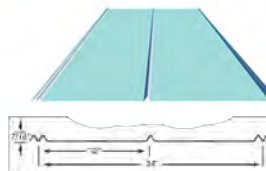

Reed's Metals supplies a full line of trim to offer a complete project. Standard trim is available to match all of the Reed's Metals profiles in 10' 2", 12' 2", 16' 2", and 20' 2" lengths. We also offer custom trim to fit any of your special projects or complex roofs and buildings. Whatever piece you need to make your job look complete, we can supply for you.
